

## Supervisor assessment of Bachelor's Thesis

**Student:** Štafl Roman

**Title:** Video Summary (id 24930)

**Supervisor:** Beran Vítězslav, Ing., Ph.D., DCGM FIT BUT

### 1. Assignment comments

The assignment offers a broader range of options on how to approach it. In choosing the basic techniques, the assignment is moderately challenging, despite the need to become familiar with techniques beyond the topics taught in the undergraduate program.

### 2. Literature usage

The student was active in obtaining study materials.

### 3. Assignment activity, consultation, communication

The student was active in solving his work and used the consultation to discuss the progress of his solution. The sub-steps of the solution were rather slower, with the student gradually familiarising himself with the issues of image processing and summarisation. During periods of increased activity, the student's interest and enjoyment in discovering new knowledge and procedures was evident.

### 4. Assignment finalisation

The work was completed on time and its partial and pre-final contents were consulted. The final content has not been seen by the supervisor.

### 5. Publications, awards

### 6. Total assessment

**good (C)**

Mr. Štafl chose a topic that interested him and about which he knew little. He often approached the issues and methods "in his own way", which slowed down the process, but on the other hand it led to improvement and a better understanding of the subject and an interest in learning new and workable methods. During his work he showed great effort and diligence, independence and ability to finish the work.
